CORPORATE RESPONSIBILITY

REDUCING LANDFILL

Keeping garments for longer is probably the single best thing we can all do to help reduce global textile landfill. To help encourage this we are planning to add a lot more care information on our website to help and encourage our customer to look after their products in order to keep them in good working order for as long as possible. This will include information on repair as well as wash care for example.

CLOSED LOOP FUTURE?

We're looking at a closed loop option supported by a secondary company. This particular company will manufacture a small capsule range of garments for us and we will promote a return to retailer programme in order to capture as many of these garments back as we can. Once back, these garments will be washed and re-made into a secondary product, whether a singlet from a tee shirt or a headband from a singlet, in order to offer these garments a second and sometimes third life and therefore to extend its life in the market place.

Secondly, we are investigating working with a UK recycling company which is the closest to a closed loop service we can offer.

We are also considering UK materials and UK manufacturing for a few lines as we could market a fully UK designed and manufactured product.

RECYCLED POLYESTER

Firstly, like all other brands in the industry we are moving more of our polyester into recycled polyester. Yes, this still provides a landfill problem later in the life of the garment, but as we sit here today the whole industry isn't geared up to offer any other total solution to date. We are increasing the overall percentage of our collection and will continue on this journey.

For Spring/summer 2022 we will have 284 fully recycled and 97 part-recycled, giving a total percentage of 40.63% of SKU's being recycled and 13.88% part-recycled

This compares to 33.77% of 100% recycled in SS21 and 11.70% of part-recycled

COMMUNITY SUPPORT

We have supported Children's Adventure Farm Trust, CAFT, over the past 5 years.

CAFT is a charity for terminally ill, disabled and disadvantaged children in the North West.

Set in the heart of the Cheshire countryside, the 17th century Farmhouse is set in 10 acres of land and is the perfect place for deserving children for all abilities to play, laugh and simply enjoy being children. Whether the children are at the Farmhouse for a day or for a few days, there is an amazing array of things to see and do.

CARBON FOOTPRINT

We are looking at reducing sea transportation from raw material manufacturers to garment manufacturers by sourcing materials (recycled wherever possible) in each manufacturing location. This not only reduces our carbon footprint but also will save approx. 15 days transportation time, customs red tape and cost.

With regard to the next stage, we are currently in discussions with a couple of external companies which includes the possibility of providing fully recyclable products.

SHIPPING BAGS PROJECT

We have completed a complete overhaul of our plastic shipping bags for all products. These are the bags used from factory to shop floor.

600k bags used across the group, which amounted to 15,000kg of plastic. There were 34 different bag sizes used across 15 suppliers. By reducing sizes of the bags we were able to save 42% on overall plastic usage. We now have one source for 100% recycled & recyclable bags.
